

Presenter abstract of the talk entitled: "Diagnostic challenges in assessing PAD and lymphoedema with complex wounds"

This presentation will focus on the different means to diagnose lower extremity peripheral artery disease after a short overview of the different clinical presentations of the disease.

What are the means to diagnose PAD? Should I perform ankle-brachial index (ABI), Toe-Brachial Index (TBI), analyze arterial Doppler waveforms, or oximetry? What are the drawbacks of the different means? This presentation will be based on the different international guidelines.
